

RTC Lemmon Dr. Traffic Improvements & Resiliency Project

The Regional Transportation Commission (RTC) of Washoe County is initiating the preparation of a study to evaluate and document the proposed project's potential environmental impacts in compliance with the National Environmental Policy Act of 1969 (NEPA).

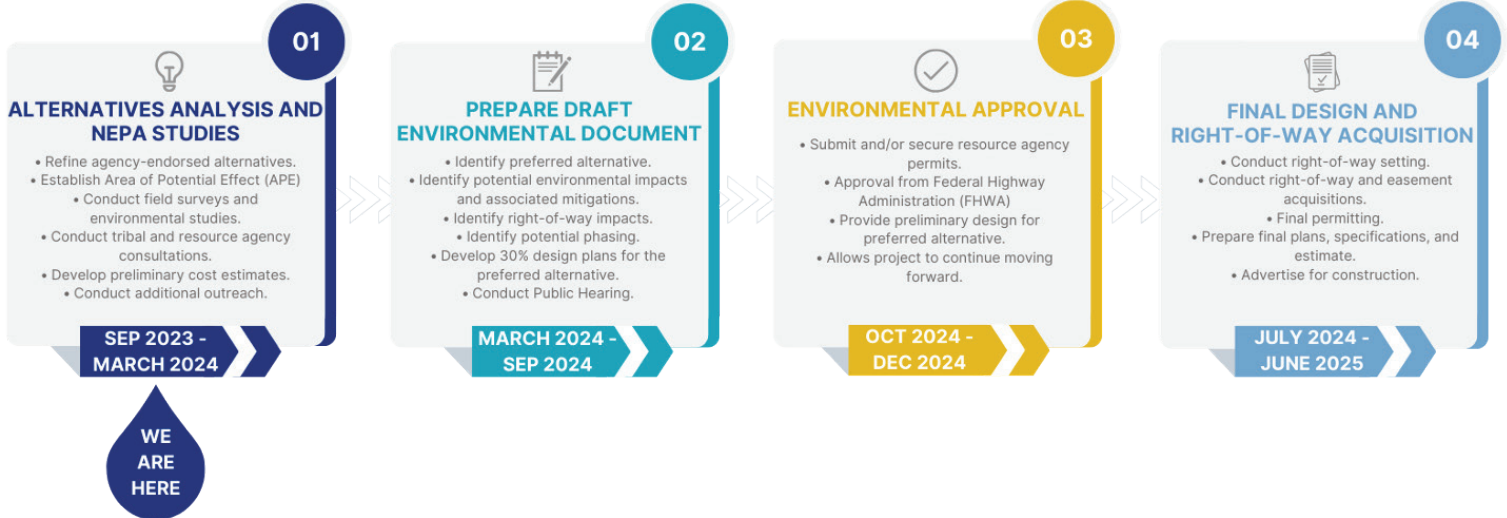

The RTC, in collaboration with regional partners, stakeholders, and the community, is leading an initiative to design and reconstruct a safer, more resilient Lemmon Drive between Fleetwood Drive and Ramsey Way. The Lemmon Drive Traffic Improvements & Resiliency Project will assess the reconstruction of the roadway above the 100-year floodplain to enhance safety, connectivity, and resilience, particularly in adverse weather conditions and emergency events.

The proposed Lemmon Drive will have two lanes of traffic, one in each direction, north of Palace Drive. Lemmon Drive between Fleetwood Drive and Patrician Drive will increase to two lanes in each direction to improve traffic operations.

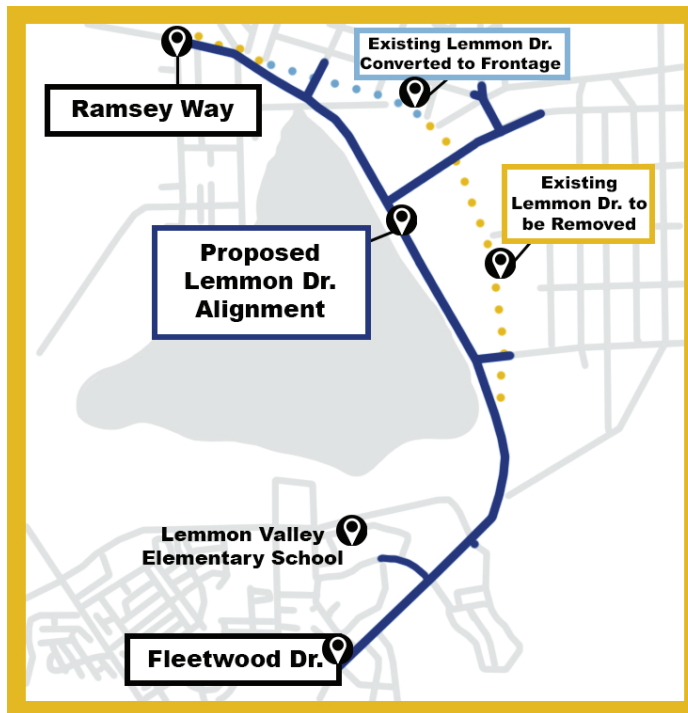

Community Benefits:

- An elevated roadway to mitigate potential flooding impacts on the transportation network while allowing reliable access by residents and emergency services during weather events
- Enhanced multimodal access (pedestrian, bicycle, and equestrian)
- Enhanced walkway access from Lemmon Drive to Lemmon Valley Elementary School
- Enhance safety for the traveling public by eliminating driveway access to Lemmon Drive
- A substantial \$50 million investment into the Lemmon Valley community
- Operational improvements from Fleetwood Drive to Palace Drive
